

## SolarTech Power Solutions

# Is Burkina Faso suitable for building an energy storage power station

## Overview

---

That's exactly what the Ouagadougou Power Grid Storage Project aims to achieve. As West Africa's largest energy storage initiative, it's like giving Burkina Faso's capital a giant rechargeable battery - one that could power 200,000 homes during peak demand [6].

That's exactly what the Ouagadougou Power Grid Storage Project aims to achieve. As West Africa's largest energy storage initiative, it's like giving Burkina Faso's capital a giant rechargeable battery - one that could power 200,000 homes during peak demand [6].

That's exactly what the Ouagadougou Power Grid Storage Project aims to achieve. As West Africa's largest energy storage initiative, it's like giving Burkina Faso's capital a giant rechargeable battery - one that could power 200,000 homes during peak demand [6]. But how does a landlocked country.

The project is earmarked to deliver 150MWp of solar PV power integrated with a 50MW battery energy storage system (BESS) The Government of Burkina Faso has signed a Public-Private Partnership (PPP) agreement with a local developer and a Dutch clean energy investment firm to develop a major solar.

Well, the Ouagadougou Energy Storage Power Station just made that vision 37% more achievable. Operational since March 2024, this 137MWh lithium-ion facility isn't just another battery project - it's solving three massive problems simultaneously: Wait, no - let's backtrack. Burkina Faso actually.

Burkina Faso marks a significant leap in its renewable energy journey with the inauguration of the Zano photovoltaic solar power plant. With a peak capacity of 24 Megawatts, this state-of-the-art facility contributes 38 GWh of clean electricity annually. Burkina Faso's ambition to develop 100MW.

To support Burkina Faso's energy genesis, our team is developing an off-grid, solar power plant ('Power-Hub') in the village of Pâ. The Power-Hub is being developed by the Calgary butter processing Woman's Co-operative. My research investigates the realistic energy demand to support select.

Burkina Faso's energy access rate sits at a sobering 19%, according to the World Bank. But here's the kicker: the country gets 3,000 hours of annual sunshine. That's enough to power Las Vegas twice over! Solar panels without storage are like having a sports car with no gas tank – great for daytime.
