

**SolarTech Power Solutions**

**Is there solar power on site**

## Overview

---

Why should you choose on-site solar?

**Control Over Energy Production:** With on-site solar, you have complete control over your energy production and usage. You can monitor system performance and make adjustments to maximize efficiency.

**Environmental Impact:** On-site solar reduces your carbon footprint by allowing you to generate clean, renewable energy on your own property.

Is on-site solar power a necessity?

In some markets, on-site generation is a necessity if a company wishes to get a facility through the planning process. And, at a time of increasing energy costs, every penny counts. “On-site solar power is one of the lowest-cost sources of clean energy but can have some limitations,” says Iron Mountain’s Pennington.

Should I Choose on-site or off-site solar?

Choosing between on-site and off-site solar depends on your specific circumstances, preferences, and goals. If you have the space, budget, and desire to generate your own energy, on-site solar may be the right choice. It offers the most control, potential cost savings, and a direct impact on your property’s value.

Do on-site solar systems work everywhere?

However, many on-site systems simply can’t scale large enough to cover full consumption needs, so they typically only cover a percentage of the facility’s needs, relying on traditional electricity to cover the deficit. They also don’t work everywhere as solar and wind resource varies from location to location, as well as incentives and rebates.

What is on-site solar?

On-site solar refers to a solar energy system that is installed directly on the

property where the energy will be used. This is the most common form of solar energy generation for residential homes and commercial buildings.

How can a solar power system save you money?

Use solar power to save you money and reduce your carbon footprint. The most common on-site renewable energy systems are solar-powered. Solar setups convert light energy from the sun into electrical current. They can be installed in sun-facing areas such as rooftops, external walls or parking lots.
