# **Japan's energy storage equipment transformation plan**

## Overview

---

Already in 2024 alone, no less than 27 grid-scale battery and energy storage projects valued at EUR 217 million were approved by municipalities to enhance transmission grids from Hokkaido, Tohoku, and Tokyo in the north, to Chubu, Kansai and Kyushu in the south. 7 Promoting.

Already in 2024 alone, no less than 27 grid-scale battery and energy storage projects valued at EUR 217 million were approved by municipalities to enhance transmission grids from Hokkaido, Tohoku, and Tokyo in the north, to Chubu, Kansai and Kyushu in the south. 7 Promoting.

Many countries are strengthening industrial policies which ensure that transformation of energy structure toward stable energy supply and decarbonization leads to economic growth. and Environment), the cornerstone of energy policy. improving economic efficiency and environment suitability. With the.

Japan's energy storage sector is expanding, though growth remains uneven across segments. The overall market is expected to grow 11% annually, from USD 793.8 million in 2024 to USD 2.5 billion by 2035. Residential adoption is moving faster. Home lithium-ion battery systems generated USD 278.5.

Japan's Green Transformation (GX) Plan is a bold new strategy aimed at transitioning the world's fourth largest economy away from fossil fuels and toward cleaner energy sources. Equally ambitious financing should catalyze investments across diverse smart energy solutions, from renewables and smart.

The Strategic Energy Plan is a compass for Japan's mid- to long-term energy policy, navigating the balance between energy security, economic efficiency, environmental sustainability, and safety ("S+3E"). The draft of the seventh plan was released on December 17, 2024, updating the sixth plan issued.

orage marker leader is overlooked. It is the lowest cost, most mature and largest-scale storage technology and is capable of supporting 100% renewable electricity systems at low cost [24 al energy storage market in Japan. As of

2023, over 300,000 households in Japan have installed storage systems.

On 18 February 2025, the Japanese government approved the 7th Strategic Energy Plan (the "Plan"), setting an updated course for Japan's future energy policy with a primary focus on achieving carbon neutrality by 2050. The Plan continues to emphasise the integration of energy and industrial policies.
