Kosovo solar Energy Storage

Overview

Could a battery storage system save Kosovo's Energy costs?

In fact, a 2018 study by the World Bank, which had for years supported the construction of Kosova e Re, found that if taking carbon and pollution costs into account, a combination of renewables and battery storage would be the most cost-effective solution for Kosovo's electricity sector.

Does Kosovo have solar power?

Kosovo has the potential of capturing solar energy directly and converting it to electricity. The region of highest solar potential based on global horizontal irradiation is the southwestern part of Kosovo, centred around the city of Gjakova. Solar power is already used on the roofs of some buildings.

How much will Kosovo's new solar power plant cost?

In addition, procedures are scheduled to be announced in the fourth quarter for a solar power plant of 100 MW for government-controlled power utility Kosovo Energy Corp. (KEK) and a solar thermal system for district heating in Prishtina, according to Rizvanolli. The contracts will have a combined value of EUR 180 million, she added.

How can Kosovo improve its energy sector?

The Government of Kosovo aims to put its energy sector on a sustainable path, through developing renewable energy potential, improving energy efficiency, closing a 50-year-old power plant, and rehabilitating another old power plant.

What percentage of energy is produced in Kosovo?

Around 90% percent of energy production in Kosovo is from lignite, a soft coal that produces toxic pollution when burnt. Official figures show Kosovo has the world's fifth largest lignite reserves of 12-14 billion tonnes. Our Standards: The Thomson Reuters Trust Principles.
