# Large-Scale Energy Storage Policy

## Overview

---

On February 27, the National Energy Administration released the "2025 Energy Work Guidance" to outline the year's energy work roadmap and boost the new energy storage industry. What is China's energy storage policy & regulatory roadmap?

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage – primarily lithium-ion battery energy storage systems (BESS) – to 180GW by the end of 2027.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

Can a large-scale storage system meet Britain's electricity demand?

Great Britain's demand for electricity could be met largely (or even wholly) by wind and solar energy supported by large-scale storage at a cost that compares favourably with the costs of low-carbon alternatives, which are not well suited to complementing intermittent wind and solar energy and variable demand.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and

resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

Does Great Britain need large-scale electricity storage?

It draws on studies from around the world but is focussed on the need for large-scale electrical energy storage in Great Britain (GB) and how, and at what cost, storage needs might best be met. In 2050 Great Britain's demand for electricity could be met by wind and solar energy supported by large-scale storage.
