Liechtenstein double-glass solar modules

48V 100Ah

Overview

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart?

What are double glass solar modules?

.

What is a dual glass solar panel?

In contrast, dual-glass solar panels replace the backsheet with a second layer of tempered glass on the rear side of the module. The combined strength of using two sheets of glass makes the solar panel less prone to becoming deformed or for microcracks to form in the cells.

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

Why are double glass solar panels bifacial?

Thermal stability: The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations. **Dual-sided energy Capture:** Many double glass modules are bifacial, allowing them to harness sunlight from both sides.

What are the advantages of double glass solar panels?

Environmental shielding: Double glass modules provide excellent defense

against moisture, corrosion, and UV radiation, reducing the risk of potential-induced degradation (PID). Thermal stability: The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations.

Can dual-glass solar panels increase solar energy production?

Installing dual-glass panels on a reflective surface, like a white rooftop, can increase solar energy production. That's because nowadays, dual-glass solar modules use bifacial cells throughout, and this power is generated from both sides of the panel instead of just one. The image shows the layers of the Vertex S+ dual glass modules
