Lithium iron phosphate battery station cabinet communication power supply

Overview

To this end, the design of the integrated centralized power supply system for lithium iron phosphate battery energy storage is clarified and its feasibility is analyzed, in order to promote the transformation of traditional power systems and complete the application of a lithium iron phosphate battery system that integrates high-voltage boxes (BMS management), battery modules, CAN communication, etc., as well as an integrated system that integrates cabinets, power distribution, UPS, batteries, precision air conditioning, monitoring, and fire protection in communication and signal power supply rooms, Realize centralized power supply and intelligent operation and maintenance of communication and signal power systems.
