Low-valley energy storage power station

Overview

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.

Can pumped storage power stations maximize power balance of regional power grid?

The existing literature shows that pumped storage power stations can maximize the power balance of regional power grid, ensure the safe and stable operation of regional power grid, and realize the economic optimization of power grid operation through reasonable modeling and new energy distribution schemes.

How does a energy storage station work?

"The energy storage station will charge during the low load period, discharge to the grid during the peak period, and participate in grid interaction through grid frequency modulation and providing emergency backup power supply.

How pumped storage power station can reduce the cost?

Therefore, on the basis of conventional small hydropower, the transformation into a small pumped storage power station or joint operation with pumped

storage can reduce the cost, shorten the construction period, solve the problem of site selection, improve the power station output in the dry season, and increase the economic benefits.

Why do we need pumped storage power stations in Zhejiang?

Vigorously developing and building small and medium-sized pumped storage power stations is an important measure to solve the current imbalance in energy development in Zhejiang, and it is also an important measure to attract capital investment, ensure local electricity safety, and create a demonstration and pilot zone for common prosperity.
