# **Malaysia 220v portable power bank brand**

## Overview

---

Designed by QualComm. Their latest version is QuickCharge 5.0. Identical to Fast Charging but capable of supplying up to a maximum of 27 watts (QuickCharge 4.0+). This Quick Charge can only be used for devices and chargers that Q. Designed by QualComm. Their latest version is QuickCharge 5.0. Identical to Fast Charging but capable of supplying up to a maximum of 27 watts (QuickCharge 4.0+). This Quick Charge can only be used for devices and chargers that QC chipsets for both device sides. If a device only has one side of QC chipsets, it will use Fast Charging technology inst.

Fast Charging is a common standard technology on most modern gadgets these day. It can supply at least 7.5 up to 12 Watt.

This charging technology is more universal. Capable of supplying up to a maximum of 100 watts. Besides Smartphones, most latest electronic gadgets already support PD – such as Laptops, Headphones& Tablets. Just like Quick Charge, your device and charger need to have a PD Chipset in order to use PD Technology. To get a clearer picture, you may refer.
