# Morocco communication base station inverter grid connection construction

## Overview

---

What is Morocco's energy strategy?

When Morocco introduced its national energy strategy in 2009, it initiated an energy transition which aims to ensure that about half of installed electricity generating capacity will come from renewable energy sources by 2030.

Does Morocco have a large share of variable renewables?

The national electricity supplier and grid operator, as well as other actors in the Moroccan energy sector, are developing solutions and improving skills to enable the electricity system to account for a larger share of variable renewables.

Is Morocco a driver of green and competitive energy?

With the new development model published in June 2021, Morocco also wants to position itself as a driver of green and competitive energy. In view of this, the country is implementing ambitious projects to expand renewable energy sources.

What is a communication base station?

In the vast telecommunications network, communication base stations play a frontline role. Positioned closest to end users, they serve as gateways for processing customer requests and managing data flow. In the words of "Interesting Communication Engineering Drawings," these stations act like "business trackers," always vigilant to:
