

SolarTech Power Solutions

Nepal communication base station power equipment

Overview

In order to provide high quality service, Nepal Telecom has deployed up to 74 communication base stations throughout the country, which are powered by HT SOLAR POWER solar power systems due to their remote location.

In order to provide high quality service, Nepal Telecom has deployed up to 74 communication base stations throughout the country, which are powered by HT SOLAR POWER solar power systems due to their remote location.

Huatong Yuantong (HT SOLAR POWER) and Nepal Telecom reached a strategic cooperation intention, and successively developed a communication base station solar power supply system solution for the project in view of Nepal's climate and regional differences. Nepal is high in the north and low in the south.

Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable communication services. For base stations located in deserts or other extreme environments, independent power supply is essential, as these areas are not only.

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage.

Nepal's leading telecom operator Ntc uses various power equipment to keep its services running throughout the country. As it provides services throughout the country, the company needs a continuous power supply to keep its services afloat. For this, it manages its power operation from the Power.

Abstract: Telecom towers, technically known as BTS (Base Transceiver Stations) are the most energy intensive part of cellular network architecture and contribute up to 60 to 80% of total cellular power consumption and varies in response to the real traffic demand throughout the day and night. But.

When natural disasters cut off power grids, when extreme weather threatens

power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. 45V output meets RRU equipment.
