New energy storage project in Cyprus

Overview

The government has approved the construction and operation of an energy storage unit in the community of Psevdas, Larnaca. The facility will have a capacity of 59 MW and 120 MWh, aiming to support the grid during periods of low renewable energy production.

The government has approved the construction and operation of an energy storage unit in the community of Psevdas, Larnaca. The facility will have a capacity of 59 MW and 120 MWh, aiming to support the grid during periods of low renewable energy production.

Cyprus is set to expand its energy infrastructure with new storage facilities and power generators, Giorgos Petrou, president of the Cyprus energy regulatory authority (Cera) confirmed on Wednesday. According to a report on StockWatch, Petrou revealed that an additional proposal is under review for.

Cyprus will begin implementing renewable energy storage systems in 2026 at the earliest, Energy Minister George Papanastasiou announced during parliamentary discussions on Tuesday, addressing the country's growing need to manage excess green energy production. The planned battery storage.

"Energy storage represents not just a technical solution, but a strategic asset in our energy security framework," minister George Papanastasiou said at an event in March. The government has approved the construction and operation of an energy storage unit in the community of Psevdas, Larnaca. The facility will have a capacity of 59 MW and 120 MWh, aiming to support the grid during periods of low renewable energy production. The unit will operate with lithium.

Cyprus is set to build its first large-scale electricity storage system within the next 16 months, according to Energy Minister George Papanastasiou. This move is key to supporting renewable energy sources like solar power, which currently face challenges due to the lack of storage. The Electricity. Does Cyprus have a battery energy storage system?

Cyprus's electricity regulator has approved plans to install 400MWh of battery energy storage system (BESS) projects in the Mediterranean island country. Cyprus Energy Regulatory Authority (CERA) announced the approval earlier this week (18 June) of three projects which will be owned and operated by the Cyprus Transmission System Operator (TSOC).

Will Cyprus install 400MWh battery energy storage system?

How is Cyprus developing pumped hydro energy storage capacity?

The country is also seeking to develop pumped hydro energy storage (PHES) capacity with technical assistance from the European Commission (EC) and is formulating a National Hydrogen Strategy. Cyprus's electricity regulator has approved plans to install 400MWh of battery energy storage system (BESS) projects.

How many energy storage applications have been approved in Cyprus?

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021. The Cyprus Transmission System Operator has received 13 storage applications totaling 224 megawatts capacity, with eight applications processed and five under review.

Why does Cyprus waste so much energy?

AKEL MP Costas Costa characterised Cyprus as “the only country in the world where thousands of megawatt-hours go unused due to lack of centralised green energy storage systems,” adding: “During the day we waste megawatt-hours because we lack storage, and at night we are one step away from blackouts.”.

Is Cyprus facing a unique set of energy challenges?

In a keynote address to open a conference on energy storage and hydrogen in March, George Papanastasiou of the Ministry of Energy, Commerce and Industry (MECI) noted that Cyprus faces a “unique set of energy challenges, which require tailored solutions.”
