

SolarTech Power Solutions

North Africa Industrial Communications BESS Power Station

Overview

Is Bess a viable power system for Africa?

The African Continental Power System Masterplan (CMP) study into BESS says that considering Africa's rapidly growing power requirements and the already planned contributions from variable renewable energy (VRE), these commitments do not fully reflect the potential for BESS on the continent.

What is a Bess system?

a situation where BESS is the primary source of power, often combined with renewable energy sources like solar or wind, to supply electricity in remote areas or during grid outages. BESS can be part of centralised or decentralised energy systems.

Does Bess work in Africa?

Experience in the African context is even more limited with very few grid-scale BESS projects that are operational. As an emerging technology it is expected that technical performance will continue to mature and improve. Already, rapid and significant improvements have been seen across most performances metrices.

What is Eskom Bess project?

BESS project. Currently, the Eskom BESS rollout project is the largest to be implemented in Africa. strengthening grid capacity through battery energy storage. Through BESS, Eskom aspires to enable the integration of distributed energy resources, and pursuing a low-carbon future to reduce the impact of greenhouse gas emissions on the environment.

What are the components of a Bess?

The diagram above shows the main components of the BESS, i.e. the battery (energy storage medium), Power Conversion System (PCS) and grid integration equipment. When required, the PCS is used to discharge/charge

the battery and supply the energy into/from the network.

Is Bess an emerging technology?

Because of its relatively recent inclusion in power systems, most international electricity markets consider BESS an emerging technology, despite some technologies already being commercially established and successful.

Experience in the African context is even more limited with very few grid-scale BESS projects that are operational.
