

Number of households generating electricity from solar panels in Switzerland

Overview

Managed by Axpo, it generates about 3.3 million kilowatt hours annually, sufficient for 700 households. Switzerland's federal parliament amended the Energy Act in 2022 to expedite the approval process for new solar plants, reflecting a shift toward sustainable energy amid the country's nuclear.

Managed by Axpo, it generates about 3.3 million kilowatt hours annually, sufficient for 700 households. Switzerland's federal parliament amended the Energy Act in 2022 to expedite the approval process for new solar plants, reflecting a shift toward sustainable energy amid the country's nuclear.

Solar power in Switzerland has demonstrated consistent capacity growth since the early 2010s, influenced by government subsidy mechanisms such as the implementation of the feed-in tariff in 2009 and the enactment of the revised Energy Act in 2018. As of 2024, solar power contributes 5.89 TWh of.

Shown is last year's electricity production from photovoltaic systems in Switzerland and the proportion of electricity consumption covered by them. To calculate the annual solar power production, the total installed capacity in kW is multiplied by the specific yield (in kWh/kW). The specific yield.

The International Energy Agency (IEA), founded in 1974, is an autonomous body within the framework of the Organization for Economic Cooperation and Development (OECD). The Technology Collaboration Programme (TCP) was created with a belief that the future of energy security and sustainability starts.

The Solar Monitor contains forecasts up to the year 2035, based on the expansion targets for new renewable energies in accordance with the Electricity Law passed last June. By 2035, 35 terawatt hours (TWh) per year are to come from such sources. + Electricity law isn't enough for Switzerland to.

of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the world at a height of 100m. The bar chart shows the distribution of

the country's land area in each of these classes compared to the.

Switzerland stands as a global leader in clean electricity generation, achieving the impressive feat of sourcing 100% of its electricity from low-carbon sources over the past year, spanning from September 2024 to August 2025. Relying substantially on hydropower and nuclear energy, more than half of.
