

SolarTech Power Solutions

Onsite energy solar panel power consumption

Overview

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Can on-site storage be used alongside solar PV?

If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure upgrades, thus increasing the feasibility of larger on-site PV installations.

What are the benefits of an on-site solar PV system?

For the scenario represented in the graph, an on-site solar PV system allows the facility to reduce the amount of electricity drawn from the grid during the middle of the day. Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities.

Should solar PV production be reduced on-site?

Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities. However, the additional generation that can result from larger systems during peak daylight hours must be exported or managed through curtailment on-site.

What is on-site power generation & why is it important?

On-site power generation is becoming a core strategy for large energy users to manage rising capacity costs, protect against outages, and advance sustainability initiatives. Whether through solar, CHP, batteries, or a hybrid approach, businesses have more tools than ever to take control of their

energy future.

What are the benefits of on-site energy?

Cost Savings: On-site energy can lead to significant cost savings for businesses and organizations, thanks to renewable energy and reduced transmission losses that occur when electricity travels over long distances.
