

Portugal Urban Energy Storage Cabinet Quote

Overview

Should energy storage be democratised in Portugal?

Energy storage is therefore essential if EU targets are to be met. Portugal's installed energy storage capacity is still predominantly based on hydro pumping, which currently stands at 4,164 GW year. However, this paradigm is about to change with the democratisation of energy storage solutions through wind and solar production.

Why is energy storage important in Portugal?

therefore essential to meet European targets. Energy storage installed capacity in Portugal is still predominantly based on hydropower pumping, which is today over 3 GW, and will increase to 4,164 GW when the Alto-Tâmega dam is completed this year. However, this paradigm is about to shift with the democratization of energy storage.

Why is it difficult to develop a market in Portugal?

8.8 GW compared to 11.8 GW recorded in 2015. Although Portugal has been a pioneer in the enactment of specific storage regulations, the lack of injection capacity in the RESP, together with the uncertainty and delay in the publication of available capacity to obtain TRC, have made it difficult to develop in Portugal as well.
