Are solar panels a wetland impact?

In the past, the posts/pilings that are used to install solar arrays have not been considered a wetland impact that would require compensatory mitigation under the WCA. The reality is that solar arrays bring wetlands into non-aquatic use and may, or may, not negatively impact the wetland's quality or function.

Should solar panels be installed on posts/pilings in wetlands?

To help local governments evaluate the potential impacts to a wetland's function and value, the Minnesota Board of Water and Soil Resources (BWSR) issued guidance that provides a suggested approach for evaluating projects when they involve the installation of solar panels on posts/pilings in wetlands.

Can Portugal set the pace for renewable acceleration in Europe?

"Portugal has an opportunity to set the pace for renewable acceleration in Europe, but they must go smart to go fast.

Do solar arrays affect wetlands?

The reality is that solar arrays bring wetlands into non-aquatic use and may, or may, not negatively impact the wetland's quality or function. Historically, solar arrays have been sited within or near farmed wetlands (wetlands that are plowed).

How does WSB assess wetlands?

WSB's experienced Natural Resources staff are available to assess wetlands to determine the general quality and function/value they provide to the ecological setting and society. The regulatory review and technical assessment will determine if the project wetland impacts require replacement.
