

## SolarTech Power Solutions

# Power supply for base station communication equipment in East Africa

## Overview

---

What types of power systems are used in communications infrastructure equipment?

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

What is a base transceiver station power system?

This is a Base Transceiver Station power system that has been designed in such a way that it comprises of one or two alternating current generating sets, the Automatic Transfer Switch (ATS), the Rectifier system, Back-up Batteries and the Breakers. 2. Base Transceiver Station with only DC Generator power machine:.

What are the different types of power supply installations?

There are also many different types of power supply installations, including those which are installed indoors for communication centers and other facilities, and those which are installed outdoors such as those for mobile telephone base stations.

Why are power supplies important for information and communication devices?

Power supplies for information and communication devices are important devices for providing stable power supply 24 hours a day, 365 days a year for the various communication devices used to provide data communication services, such as telephone and Internet.

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to +/-12V

and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.

Why do telecommunication power supplies use direct current?

Therefore using direct current power from a rectifier connected to storage batteries as input, and inverting it to alternating current allows for continued supply of power to telecommunication equipment even if there is a power outage. Introductions to Shindengen Telecommunication Power Supplies information.
