# Prices of new solar modules in Libya

## Overview

---

Is solar energy available in Libya?

Solar energy by far is the most available in Libya as the average sunlight hours is about 3200 hours/year and the average solar radiation is approximately 6 kwh/m<sup>2</sup>/day. This paper aims mainly to discuss the feasibility of solar energy in Libya, a brief overview of solar global jobs and the global cost of PV systems during the last decade.

How many solar panels will be used in Libya?

According to the Renewable Energy Authority of Libya that about 1.2 million solar panels will be used in the project to generate up 152 TWh per year. It is planned that the implementation of the strategic project to reach 25 percent of the generation capacity during the year 2022 .

What is the largest solar project in Libya?

Sadada area is about 280 km south east of Tripoli . This plant will be the largest solar project in Libya with the latest technological application in the field of solar energy. According to the Renewable Energy Authority of Libya that about 1.2 million solar panels will be used in the project to generate up 152 TWh per year.

When did solar PV systems start in Libya?

In 2003 the installation of solar PV systems to some rural areas started in Libya . The installation was achieved by the Centre of Solar Energy studies (CSES) and General Electricity Company of Libya (GECOL) with a total power of around 345 KWp. PV systems supplied villages, isolated houses, police stations and street lighting areas .

What is solar water pumping in Libya?

Water pumping was one of the feasible photovoltaic solar applications in Libya which was used to supply water for rural places, humans and live stock from

remote wells. In 1983 PV system was firstly used in the agriculture sector, however, at the beginning of 1984, projects of solar water pumping were initiated with a peak power about 110KWp .

Will Libya have a high demand for energy?

According to studies, the demand for electricity in Libya is experiencing a rapid growth and might exceed 115 giga watts by 2030 which will make high demand for fossil-fuel energy unless alternative resources of energy are used to conserve the energy resources .
