## Overview

---

Quotes for rooftop solar projects are averaging \$28,750 before incentives, said the marketplace operator. Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report.

Quotes for rooftop solar projects are averaging \$28,750 before incentives, said the marketplace operator. Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report.

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

Quotes for rooftop solar projects are averaging \$28,750 before incentives, said the marketplace operator. Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform.

Note: Data is expressed in constant 2024 US\$ per watt.  
[OurWorldInData.org/energy](https://OurWorldInData.org/energy) | CC BY IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'. This.

Consider solar panels if you have a high utility bill, get lots of sun and qualify for tax breaks or other savings. Some or all of the mortgage lenders featured on our site are advertising partners of NerdWallet, but this does not influence our evaluations, lender star ratings or the order in which.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

Understanding solar panel costs in 2025 holds immense significance in the context of shaping sustainable energy decisions. We're in this era where going green is not just a buzzword; it's a way of life. The financial landscape of solar energy in 2025 influences the feasibility of adoption, the. How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

Are solar panels worth it?

The federal solar tax credit may reduce the net cost to \$20,552, and local incentives can further lower the cost. You can determine whether solar panels are worth it for your home by considering various factors, such as local incentives and policies, your electric bill, and how you finance the system.

Why do solar panels cost so much?

In the realm of solar panel costs, regional variations play a significant role, with prices influenced by factors such as local incentives, installation demand, and the overall solar market landscape. Examining the data on average solar panel costs per watt across different states provides insights into these geographical disparities.

How have solar panels cost and efficiency changed over time?

Let's take a look at how solar panel cost and efficiency have changed over time. Solar panels are about 60% cheaper and 40% more efficient than they were in 2010. Solar panels in 2010 cost about \$8.70 per watt and were about 15% efficient. Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. Net cost of the system / lifetime output = cost per kilowatt hour.

## How much does a solar panel cost in 2025?

We also consider these data points in our solar panel scoring criteria. In 2025, the average cost of a solar installation is about \$19,000, or \$3.00 per watt, before any incentives are factored in. The industry standard for efficiency is between 19% and 22%, but we're beginning to see more panels with efficiency ratings above 22%.
