

**SolarTech Power Solutions**

# **Sao Tome and Principe Hybrid Energy Storage Project**

## Overview

---

At its core, the system combines solar photovoltaic arrays with a flow battery storage setup that could power 15,000 homes. But here's the kicker—they're using retired EV batteries from Europe, giving old power packs new purpose under the African sun [1].

The São Tome and Príncipe Energy Storage Garden, launched in 2024, has become the talk of the renewable energy world. But why should a country smaller than New York City grab global attention?

Let's peel back the layers. Who Cares About Power Solutions in Paradise?

This project isn't just for.

Last week, São Tomé and Príncipe (STP) officially joined AMP and hosted a two-day project launch workshop, becoming one of the newest national projects under active implementation. Although around 70% of rural areas in STP are electrified, many communities remain off-grid or face unreliable supply.

Global OTEC's flagship project is the "Dominique," a floating 1.5-MW OTEC platform set to be installed in São Tomé and Príncipe in 2025 (Figure 1). The company says the platform "will be the first commercial-scale OTEC system." That's significant because OTEC is a technology that was proposed as far.

A tropical paradise where 30% of electricity comes from expensive diesel generators [1], while abundant sunshine goes untapped. That's São Tome and

Principe's current energy reality. With 95% of energy imports costing \$28 million annually [3], the twin-island nation desperately needs sustainable.

**Policies Towards Foreign Direct Investment.** According to Article 4 of the Investment Code, both domestic and foreign investors are free to establish and own business enterprises, as well as engage in all forms of business activity in STP, except in the sectors defined by law as reserved for the.
