Silicon crystal solar power generation system

Overview

Crystalline silicon or (c-Si) is the forms of , either (poly-Si, consisting of small crystals), or (mono-Si, a). Crystalline silicon is the dominant used in technology for the production of . These cells are assembled into as part of a to generate

Monocrystalline solar cells are made from a single continuous crystal of silicon, meaning the silicon atoms are arranged in a perfect, uniform lattice. This ordered structure allows for high electron mobility, reducing energy loss and making these cells the most efficient on the market
