Singapore Energy Storage Power Station Revenue Model

Overview

Will Singapore expand Southeast Asia's biggest battery storage plant?

Singapore's government and Energy Market Authority consider expansion of Southeast Asia's biggest battery storage plant, grid enhancements.

Does Singapore need energy storage systems to manage solar intermittency?

However, the minister said there is a need to "step up energy storage systems to manage solar intermittency." Talks are currently ongoing with Sembcorp, the engineering conglomerate behind the 200MW/285MWh battery energy storage system (BESS) installation on Singapore's Jurong Island.

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

What are Singapore's Energy Solutions?

The proposed solutions include enabling more energy imports from abroad, and relying on a broad range of technologies within Singapore's borders, as well as upgrading the grid and speeding up connection times for new energy projects.

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.
