

**SolarTech Power Solutions**

# **Solar panel rated power**

## Overview

---

What is the wattage rating of a solar panel?

The Wattage rating of a solar panel is the most fundamental rating, representing the maximum power output of the solar panel under ideal conditions. You'll often see it referred to as "Rated Power", "Maximum Power", or "Pmax", and it's measured in watts or kilowatts peak (kWp).

What does rated power mean when choosing solar panels?

One of the key terms you need to understand when choosing solar panels is Rated Power. This is the maximum amount of electricity a solar panel can capture under ideal conditions. However, the rated power does not mean the panel will always generate that amount of electricity.

What is the efficiency rating of a solar panel?

Most solar panels have an efficiency rating between 17%-23%. A solar panel with a 21% efficiency rating means it converts 21% of the sun's energy striking it into electricity. Do not confuse the efficiency rating with the rated output. A 23% efficiency rating does not mean the panel will only produce 23% of its rated output in watts.

What is a maximum power current rating on a solar panel?

The Maximum Power Current, or  $I_{mp}$  for short. And the Short Circuit Current, or  $I_{sc}$  for short. The Maximum Power Current rating ( $I_{mp}$ ) on a solar panel indicates the amount of current produced by a solar panel when it's operating at its maximum power output (Pmax) under ideal conditions.

What does wattage mean on a solar panel?

You'll often see it referred to as "Rated Power", "Maximum Power", or "Pmax", and it's measured in watts or kilowatts peak (kWp). For example, the nameplate from my solar panel specifies a Wattage output of 100W, meaning that the solar panel is capable of producing 100 Watts of power under ideal

conditions.

What is the peak rating of a solar system?

If you add up the rated power for all of the panels, then you get the peak rating of a solar system. The STC rating is always the highest rating. This is because it rates solar panels in terms of the instantaneous power that they produce under a set of ideal conditions. But when do ideal conditions ever exist in anything in this world?
