Solar panels can cut your electricity costs by 70% or more. But the sticker shock is real. Most systems cost at least \$10,000 to \$30,000. That's a lot of money upfront. Some people don't realize that solar panels are just one piece of the puzzle. Your solar energy system needs several other parts to work.

Why is solar so expensive in 2023?

Solar system costs have significantly decreased in recent years, but the costly investment is primarily due to the materials, manufacturing, and installation costs. We'll break down why solar is so expensive in 2023 and how the hard and soft costs of solar panels impact the total cost of going solar.

What are the different types of solar costs?

This cost category also includes the expense of doing inventory and shipping/handling the equipment, accounting for around 9% of solar costs. Soft costs are the extra expenses that go into the price of going solar, making up about 56% of the total cost of a solar energy system. These include installation fees, permit costs and business costs.

Are solar panels a good investment?
