# **Solar panels exported to the Middle East**

## Overview

---

In September 2024, China exported approximately 2.43GW of photovoltaic modules to the Middle East market, representing a 2% decrease from 2.49GW in August but a 31% increase compared to 1.85GW in September of the previous year.

In September 2024, China exported approximately 2.43GW of photovoltaic modules to the Middle East market, representing a 2% decrease from 2.49GW in August but a 31% increase compared to 1.85GW in September of the previous year.

Wood Mackenzie forecasts the Middle East and North Africa region will emerge as a tariff haven and overtake Southeast Asia as a top solar export hub, becoming the primary exporter of solar panels to the US towards the end of this decade. Solar manufacturing in the Middle East and North Africa.

Explore how the Middle East is accelerating its role in the global energy transition by localizing solar PV manufacturing. This paper examines national strategies, industrial policy, and infrastructure investments shaping the region's emergence as a key player in the solar supply chain. As global.

In September 2024, China exported approximately 2.43GW of photovoltaic modules to the Middle East market, representing a 2% decrease from 2.49GW in August but a 31% increase compared to 1.85GW in September of the previous year. During the third quarter of 2024, China's total photovoltaic module.

The Middle East and North Africa (MENA) region is rapidly emerging as a significant player in the global solar manufacturing sector, positioning itself as a "tariff haven." With projections indicating that solar manufacturing capacity could reach up to 44 GW by 2029, MENA is poised to potentially.

According to data from Chinese customs, from 2022 to 2023, China's PV module exports to the Middle East and North Africa have consecutively exceeded 10GW. Among them, Saudi Arabia and the United Arab Emirates have seen rapid growth in shipments. Taking Saudi Arabia as an example,

China's PV module.
