Solar panels installed in Ukraine

Overview

Solar on residential rooftops is popular for saving on electricity bills, which rose in the mid-2020s. Solar is also suitable for many. At the beginning of 2022 there was 1.2 GW of household solar, of which it is estimated 280 MW had been destroyed by the end of 2024. The IEA estimate that if all (excluding north-facing) roofs had panels 290 TWh could be generated.

The Solar Energy Association of Ukraine says the country installed 800 MW to 850 MW of solar capacity in 2024, driven mainly by business and residential installations.

The Ukrainian solar power sector installed between 800 MW and 850 MW of new capacity in 2024, despite living under a full-scale invasion, according to estimates presented by the Solar Energy Association of Ukraine (ASEU).

The largest residential solar systems in 2019 were installed in households in Dnipro, Ternopil and Kyiv regions (including Kyiv). These three regions account for more than a third of all households using solar energy.

Solar energy in Ukraine is gaining traction. With one of the largest solar energy companies in the country aiming to deliver 1 Gigawatt of solar and wind energy by 2030, there is a huge spike in demand. Ukraine has a range of incentives designed to encourage investment in solar power facilities.
