

## SolarTech Power Solutions

# Somalia Telecom solar Site

## Overview

---

Hormuud Telecom, Somalia's largest telecommunications provider, is advancing its commitment to renewable energy by developing solar-powered data centers, a key move to support both local and global AI economies. Can solar energy be used in Somalia?

In a real case study, a solar photovoltaic system in Somalia achieved a performance ratio of 70.8%. Recommendations have been provided to increase the utilization of solar energy in Somalia. Based on the extensive review conducted by the authors, no previous study has been performed on the solar energy potential in Somalia.

Can Somalia harness solar energy?

This study explores Somalia's energy profile and the potential for harnessing solar energy. The installed photovoltaic capacity was found to be 41 MW and contributed 11.9% of the total electricity generation. A case study on a solar power microgrid system in Bacadweyene, Somalia, is also presented.

How to plan a solar energy project in Somalia?

When planning and implementing solar projects in Somalia, it is essential to consider these factors and their potential impact on the project's success. To ensure the success of a solar energy project from an economic point of view, it is essential to evaluate its financial viability and reliability beforehand.

Which companies invest in solar energy in Somalia?

Since 2015, the most significant investment in solar energy in Somalia has been produced by leading ESPs. The companies, which include BECO, NESCOM, and Sompower, have invested in the solar system project in different capacities, with BECO producing the most significant investment in the Somali energy sector.

Is solar energy sound in Somalia?

The average yearly irradiation for 11 years of Somalia was obtained in terms of maximum radiation in Bari and minimum radiation in the Middle Juba region. Therefore, the data demonstrated that solar radiation is typically sound within Somali territory. Fig. 7. Diagram indicating the potential of solar energy based on the map of Somalia [51, 59].

What is the energy supply in Somalia?

Energy supply Somalia's energy capacity is around 344 MW, mainly generated from imported diesel fuel. However, some ESPs have installed grid-connected solar PV systems. In Table 3, Energy supply and tariffs in the Federal Member States have seen a 36% yearly increase in the past six years.
