Overview

Does Tanzania need a sustainable electricity sector?

According to Agenda 2063 of the African Union, enhanced energy security and the creation of jobs will be significant side effects of a successful transition to renewable energy. Though, Tanzania's efforts to establish a sustainable electricity sector are being hampered by a number of systemic obstacles.

How many MW of electricity does Tanzania have?

Tanzania aims to diversify its electricity generation mix. As of December 2024, the total installed capacity of 3,404.20 MW comprised 2,011.27 MW hydro (59.1 percent); 1,198.82 MW natural gas (35.2 percent); 101.12 MW heavy fuel oil (HFO) and diesel (3 percent); 5 MW solar.

Are there challenges facing Tanzania's electricity infrastructure?

Nevertheless, there are still several difficulties facing Tanzania's mainland electricity infrastructure. Tanzania is a prospective contender in the production of sustainable energy due to its large potential for renewable energy.

How has Tanzania's electricity system changed over the last 10 years?

Tanzania's electricity grid has changed during the last ten years, with natural gas now predominating over huge hydropower. While it is still a fossil fuel, natural gas has the advantage of being quite versatile. A natural gas power plant's generation can be swiftly increased or decreased to meet the power system's fluctuating demands.

How many villages in Tanzania will be able to access electricity?

electricity access for 37 villages in Tanzania along the transmission line. Project comprises of 1) Construction of 49.5 MW hydropower plant, 2) 132 kV transmission line, 54 km long for power evacuation to the national grid, and 3) Distribution network expansion including rural electrification and last-mile

connections.

Can Tanzania achieve universal electricity access?

Tanzania has a tremendous opportunity to achieve universal electricity access by accelerating grid densification where power infrastructure exists and leveraging DRE solutions for extremely remote areas, particularly islands, where the grid is not feasible.
