

# **Time-controlled wind power installation for wind-solar hybrid communication base stations**

## Overview

---

Can a hybrid solar and wind power system provide reliable electric power?

This paper presents the solution to utilizing a hybrid of photovoltaic (PV) solar and wind power system with a backup battery bank to provide feasibility and reliable electric power for a specific remote mobile base station located at west arise, Oromia.

Can a hybrid system be used to supply electricity to telecom towers?

. A hybrid system consisting of Photovoltaic modules and wind energy-based generators may be used to produce electricity for meeting power requirements of telecom towers (Acharya & Animesh, 2013; Yeshalem & Khan, 2017). A schematic of a PV-wind-batterybased hybrid system for electricity supply to telecom tower is shown in Fig. 17..

How much electricity does a PV/wind/battery hybrid system produce?

Monthly average electricity production of PV/Battery hybrid system. 5.1.2. PV/Wind/Battery configuration are DC. The result is based upon the system with 41.4 kWh/day telecom load at 5.83 kWh/m solar radiation, 3.687m/s of wind speed and \$0.8/L diesel price.

What is hybrid optimization model for electric renewable (Homer)?

All the necessary modeling, simulation, and techno-economic evaluation are carried out using Hybrid Optimization Model for Electric Renewable (HOMER) software. The best optimal system configurations namely PV/Battery and PV/Wind/Battery hybrid systems are compared with the conventional stand-alone diesel generator (DG) system.
