What are bifacial solar panels?

Bifacial solar modules are modules that generate energy on both their front and rear sides, based on solar cells with two active sides. While the energy production of traditional monofacial solar panels is relatively easy to forecast, bifacial panels provide a bit more of a challenge.

How to calculate bifacial solar power output?

The general formula for determining the total energy generation of a bifacial solar panel is the sum of the energy output on the front side and the energy output on the rear side. However, as the energy output on the rear side is much more difficult to calculate, the total calculation of bifacial power output requires some industry innovation.

Do bifacial solar panels increase power output?

Wei et al. reported that with diverse backgrounds, the power output gains of a bifacial module with an n-type PERT solar cell are almost 7.6% on grass, 15% on sand, and 29.2% on snow. Annual energy yield gain of bifacial east-west modules over south-oriented monofacial modules significantly improves with albedo in Amsterdam.

What are bifacial and monofacial solar cells?

Front and rear view of monofacial and bifacial photovoltaic (PV) modules . Bifacial solar cells encased in a glass/backsheet structure provide more power under standard test conditions (STC) than glass/glass PV bifacial modules.

Should glass/glass PV modules have bifacial solar cells?

However, glass/glass PV modules with bifacial solar cells deliver extra power in outdoor settings due to absorption from the module's rear side. As a result, a glass/glass module structure with bifacial solar cells was recommended by since it can fully utilize the potential of bifacial solar cells.

Why are bifacial solar panels becoming more popular?

In the solar PV industry, bifacial PV modules are becoming increasingly popular. This is because, when compared to monofacial PV modules, the module can absorb radiation on both sides of the panels to generate electricity, increasing the energy yield per square area.
