Tuvalu wind power storage battery

Overview

Renewable energy in Tuvalu is a growing sector of the country's energy supply. Tuvalu has committed to sourcing 100% of its energy from renewable sources. This is considered possible because of the small size of the population of Tuvalu and its abundant solar energy resources due to its tropical location. It is somewhat complicated because Tuvalu consists of nine inhabited islands. The Tuvalu National Energy Policy (TNEP) was formulated in 2009, and the Energy Strategy is currently being updated.

ADB and the Government of Tuvalu have commissioned 500 kilowatt on-grid solar rooftops in Funafuti and a 2 megawatt-hour battery energy storage system that will provide clean and reliable electricity supply to the country's capital and help achieve the government's ambitious renewable energy targets.
