

# **Use of energy storage batteries in Botswana**

## Overview

---

By 2030, 140MW of BESS will be needed to support the uptake of renewable energy generation. Image: Scatec. The World Bank Group has approved plans to develop Botswana's first utility-scale battery energy storage system (BESS) with 50MW output and 200MWh storage capacity.

This Southern African nation is quietly installing 21 energy storage projects that could rewrite the rules of renewable energy integration. With global energy storage becoming a \$33 billion industry [1], Botswana's strategic move couldn't be timelier. Who's Reading This?

(And Why They Should Care).

A country better known for diamonds and desert landscapes is now storing sunshine like a camel stores water. The Botswana battery energy storage power station project isn't just another energy initiative - it's the backbone of Southern Africa's renewable energy future. Let's unpack why engineers.

e battery energy storage system (BESS). The 50 MW/200 MWh project will allow for the stable integration and management of as historically been dominated by coal. Currently, renewable energy accounts for just 2% o the country's electricity generation. Increasesin Botswana's Renewable Energy.
