

SolarTech Power Solutions

Vaduz sun room solar panel manufacturer

Home Energy Storage (Stackble system)

High Efficiency

Easy installation

Safe and Reliable

Perfect
Compatibility

Product Introduction

- Scalable from 10 kWh to 50 kWh
- Self-Consumption Optimization
- Integrated with inverter to avoid the compatibility problem

- LFP battery, safest and long cycle life
- Stackable design, effortlessly installation
- Capable of High-Powered
- Emergency-Backup and Off-Grid Function

Overview

How much solar energy does Vaduz produce a day?

In summer months, Vaduz experiences peak solar energy production with an average daily yield of 5.71 kWh/kW due to longer daylight hours and higher sun position in the sky. The energy production slightly drops in spring to an average daily output of 4.85 kWh/kW as sunlight duration decreases gradually.

What is a solar panel facade?

A solar panel facade generates energy and therefore has a payback period where you write off other solutions and do not recoup them. The aesthetic addition of Solarix panels and sustainability of the facade increases the real estate value and rentability of a building.

Can Solarix solar panels be used in office and residential buildings?

These 7 examples show the possibilities of integrating Solarix standard solar panels in office and residential buildings. Solarix solar panels are used in the closed parts of the facade, in combination with open parts (glass) and with or without other facade materials.

Why should you choose Solarix solar facades?

Solarix solar facades can contribute to achieving BENG, label C and labels such as BREEAM or LEED. If you make buildings more sustainable, you want your investment to last a long time. Very long: at least 25 years. That is why we only use the highest quality materials and the construction can withstand all weather conditions.
