Vanadium liquid flow battery technology

Overview

How do vanadium flow batteries work?

Here's how our vanadium flow batteries work. The fundamentals of VFB technology are not new, having been first developed in the late 1980s. In contrast to lithium-ion batteries which store electrochemical energy in solid forms of lithium, flow batteries use a liquid electrolyte instead, stored in large tanks.

What are the advantages of using vanadium flow batteries for energy storage?

The key advantages of using vanadium flow batteries for energy storage include their longevity, scalability, safety, and efficiency. Longevity: Vanadium flow batteries have a long operational life, often exceeding 20 years. Scalability: These batteries can be easily scaled to accommodate various energy storage needs.

What is a vanadium redox flow battery?

Vanadium Redox Flow Batteries (VRFBs) have emerged as a promising long-duration energy storage solution, offering exceptional recyclability and serving as an environmentally friendly battery alternative in the clean energy transition. VRFBs stand out in the energy storage sector due to their unique design and use of vanadium electrolyte.

What is a vanadium flow battery (VFB)?

Vanadium flow batteries (VFBs) offer distinct advantages and disadvantages compared to other energy storage technologies like lithium-ion batteries and pumped hydro storage, primarily in cycles, lifespan, and safety.

How long do vanadium flow batteries last?

While vanadium flow batteries can cycle through charge and discharge many times, issues such as membrane degradation can shorten their effective life. A lifespan of around 10,000 cycles is common, unlike lithium-ion batteries,

which can offer around 3,000 to 5,000 cycles.

When were vanadium flow batteries invented?

In the 1980s, the University of New South Wales in Australia started to develop vanadium flow batteries (VFBs). Soon after, Zn-based RFBs were widely reported to be in use due to the high adaptability of Zn-metal anodes to aqueous systems, with Zn/Br₂ systems being among the first to be reported.
