Western European energy storage battery project construction

Overview

What is the European energy storage inventory?

The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe. A real-time dashboard for energy storage also includes their locations and technologies – chemical storage, electrochemical storage, mechanical storage, and thermal storage.

How many energy storage projects are there in Europe?

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy Storage Inventory, launched by the European Commission. The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe.

Which country has the most energy storage projects?

By far, the largest number of projects are located in the United Kingdom – 66 (6,2 GW). Italy is in second place (with 13 projects totaling 1.7 GW), followed by Germany (19 – 1.6 GW), according to the inventory. European Energy Storage Inventory – projects under construction by country.

What is the Eirie platform?

The European Interconnection for Research Innovation & Entrepreneurship (EIRIE) Platform is an interactive multi-functional platform that acts as the meeting point for all actors in energy research and innovation from all over Europe.

Why is energy storage important?

With the REPowerEU Plan and its ambition to accelerate the uptake of renewable energies, as well as in the broader context of the EU climate neutrality goal, energy storage has become ever more important to guarantee

energy security of supply, the European Commission said.
