These devices convert the DC electricity that the solar panels produce into the required AC electricity. Inverters come in two main types: string inverters and microinverters.

What is a whole house solar generator?

A whole house solar generator is a system that captures solar energy and converts it into electricity for home use. It consists of solar panels, an inverter, and battery storage. This setup allows homeowners to power their entire residence with renewable energy, significantly reducing reliance on traditional power sources.

Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.
