

**SolarTech Power Solutions**

# **Wind Solar and Storage System Firewall**

## Overview

---

What is a wind storage system?

A storage system, such as a Li-ion battery, can help maintain balance of variable wind power output within system constraints, delivering firm power that is easy to integrate with other generators or the grid. The size and use of storage depend on the intended application and the configuration of the wind devices.

What is co-locating energy storage with a wind power plant?

Co-locating energy storage with a wind power plant allows the uncertain, time-varying electric power output from wind turbines to be smoothed out, enabling reliable, dispatchable energy for local loads to the local microgrid or the larger grid.

Are energy storage systems vulnerable to cyberattacks?

Energy storage systems (ESSs) are becoming an essential part of the power grid of the future, making them a potential target for physical and cyberattacks. Large-scale ESSs must include physical security technologies to protect them from adversarial actions that could damage or disable the equipment.

How can the wind industry protect against cyberattacks?

These technologies and defense techniques will be shared broadly with the wind industry to harden communication systems to cyberattacks and detect adversary actions. Create five topologies with a combination of hardening technologies.

Can wind-storage hybrid systems provide primary energy?

Thus, the goal of this report is to promote understanding of the technologies involved in wind-storage hybrid systems and to determine the optimal strategies for integrating these technologies into a distributed system that

provides primary energy as well as grid support services.

How can wind industry improve cyber security?

Advise the wind industry of improvements to wind site security with the successful deployment of different cybersecurity technologies. Actionable, quantitative guidance for the wind industry on the best cybersecurity technologies to defend against local and remote wind site cyberattacks.
