# Wind Solar and Storage Third Quarter Report

## Overview

---

Download our Q3 2025 US Renewable Energy Pulse report for detailed analysis of solar, battery storage, wind energy trends, and other energy sector performance measures.

Download our Q3 2025 US Renewable Energy Pulse report for detailed analysis of solar, battery storage, wind energy trends, and other energy sector performance measures.

Solar and Energy Storage Lead the Charge to Surpass Q3 2023 Installation Record with 10+ GW of Clean Power Added WASHINGTON DC, December 3, 2024 – The American Clean Power Association (ACP) today released its latest Clean Power Quarterly Market Report, detailing a surge in clean energy deployment.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

Reflecting industry momentum sparked by the Inflation Reduction Act, ACP reported a U.S. utility-scale project pipeline that includes 22,135 MW of wind, 84,646 MW of solar and 21,445 MW, 62,109 MWh of energy storage. | ACP The U.S. grid added a record 5,551 MW of utility-scale solar, wind and.

In the second quarter of 2025, renewable sources of energy (solar, wind, and battery storage) accounted for 85% of new generation capacity, continuing their dominance of new power sourcing. As demand for battery storage surges and potential policy shifts loom later this year, understanding the.

Clean energy developers brought just 3.4 GW of new capacity online in the third quarter of this year, the least in three years, according to a new report from American Clean Power, which advocates for energy transition policies. Project delays accelerated during the third quarter, ACP said, in.

-Industry sets third quarter installation record, though challenges to growth

remain -Battery storage deployment to date exceeds total 2022 installations  
-Land-based wind commissions drop significantly WASHINGTON, D.C.,  
November 1, 2023 - The American Clean Power Association (ACP) today  
released. How many mw did solar install in the third quarter?

The industry connected 2,142 MW / 6,227 MWh of storage in the third quarter, bringing year-to-date installations to 4,374 MW / 13,444 MWh. Solar installed 3,121 MW in the quarter, outpacing the rate of installations in 2022 but slightly behind 2021 volumes.

What percentage of solar PPA announcements were based on wind?

Power Purchase Agreements: Through Q3 of 2023, solar comprised 59% of all PPA announcements while land-based wind represented 32%. Compared to Q3 of 2022, solar PPA announcements for this quarter decreased by 59%, wind by 21%, and battery storage by 55%.

What was the largest utility-scale solar project in the quarter?

TotalEnergies' Danish Fields Solar was the largest utility-scale solar project brought online during the quarter. Located in Matagorda County, Texas, the project has a capacity of 600 MW and is paired with a 150 MW/225 MWh battery storage system that also became operational during the quarter.

How much solar was commissioned in the first quarter of 2024?

Cumulatively, 19.5 GW of solar was commissioned in the first three quarters of 2024, more than double the amount compared to the same point in 2023. About 39% of the development in-quarter took place in Texas. TotalEnergies' Danish Fields Solar was the largest utility-scale solar project brought online during the quarter.

Will Doug Burgum sign off on solar & wind projects?

On July 15, days after passage of the OBBBA, the Department of the Interior (DOI) issued a memorandum stating that Interior Secretary Doug Burgum will need to personally sign off on numerous types of federal permitting approvals for solar and wind projects.
